Rotary Turbine Ventilators

Available in Sizes 6"-18"

Galvanized or Aluminum

***Special Order Stainless Steel Available*

Turbine vents have been used for generations in residential, commercial, agricultural and industrial buildings. The vents are very affordable, easy to install, and they pump vast amounts of air from attic spaces.

Our turbine vents provide low cost roof ventilation and work effectively whether or not the wind is blowing. The turbine head turns on a self lubricating nylatron bearing system. This maintenance free system creates a lower coefficient of friction allowing for easier rotation of the roof turbine ventilator which increases efficiency and eliminates any noise. These premium quality turbines are not available in retail locations.

Uses

- ✓ Active and Passive Air Removal
- ✓ Attic Ventilation for Homes
- ✓ Commercial Ventilation
- ✓ Cargo Ventilation
- ✓ Roof Exhaust

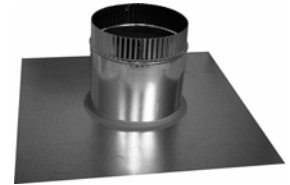

Benefits

- ✓ Wind Powered Ventilation
- ✓ Reduces Energy Costs
- ✓ Heavy Gauge Metal for Years of Use

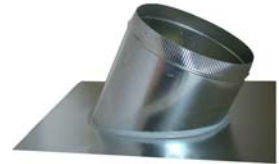

ALTERNATIVE OPTION BASE

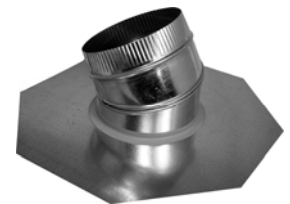

Available Roof Bases

FLAT BASE
